STRAVIE TECHNOLOGIES
BY STARVIE LABS

SHAPE

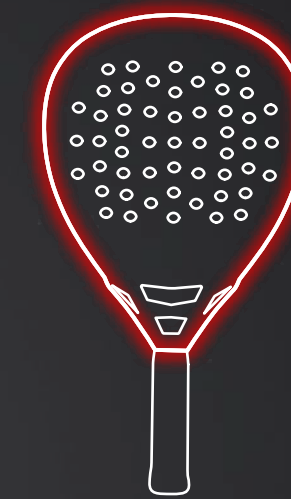

STARVIE offers rackets in diamond, hybrid, teardrop, and round shapes. The shape defines the playing style and performance characteristics.

DIAMOND SHAPE

Maximum power on offensive shots.

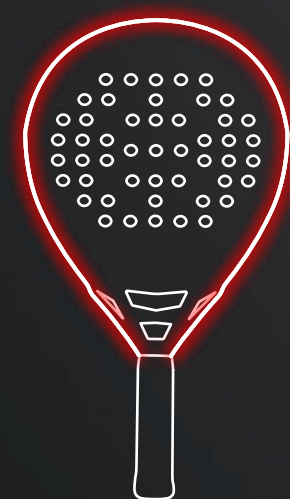

» **Ideal for aggressive players looking for decisive finishing shots.**

HYBRID SHAPE

Balanced mix of power, control, and ball output. Larger sweet spot.

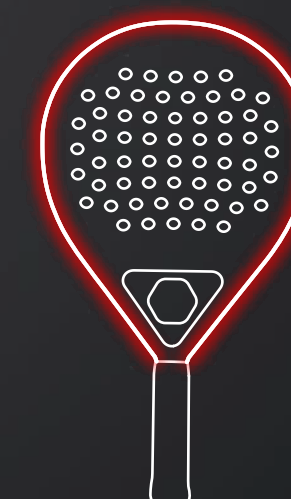

» **For versatile players seeking full adaptability on court.**

TEARDROP SHAPE

Perfect balance between power and control. Good maneuverability without losing punch.

» **Designed for all-round players with both offensive and defensive styles.**

ROUND SHAPE

More control and precision in every shot. Excellent maneuverability.

» **Recommended for control-focused players with a defensive mindset.**

STRAVIE TECHNOLOGIES
BY STARVIE LABS

MATERIALS

NEW

24K CARBON MASTER

High-density carbon fiber with 24,000 filaments and a compact structure that ensures maximum structural uniformity. It delivers an ultra-direct and precise response with minimal surface deformation, even on the most demanding shots. Recommended for players focused on maximum performance, consistency, and immediate ball output.

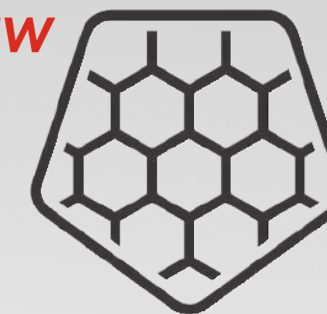

NEW

18K CARBON HYBRID

Carbon fiber with 18,000 filaments that strikes the perfect balance between flexibility and firmness. Its intermediate density reduces vibrations and promotes quick recovery after impact, delivering controlled power and a superior comfort feel. A versatile choice for players who combine control with aggressive play.

NEW

12K CARBON HYPER

Carbon fiber with 12,000 filaments that provides lightness and boosted feel. Its more open structure expands the sweet spot and improves ball contact, allowing for precise control without losing reaction speed. Ideal for players who prioritize a smooth touch and total control.

NEW

3D CARBON

Multilayer structure with a three-dimensional weave that reinforces the racket's structural stability and reduces deformation during impact. This advanced structure maintains control even on off-center hits, minimizing power loss and delivering a more lively, precise, and consistent feel across the entire hitting surface.

X-GLASS TECH

Next-generation fiberglass with advanced properties that optimize the surface's elasticity, ensuring ultra-fast recovery after each impact. The result: a soft, responsive feel, explosive ball output, and exceptional comfort—transforming every shot into a unique playing experience.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

TYPE OF EVA RUBBER

H-EVA POWER

High-density hard EVA foam developed for technical players seeking peak performance. H-Eva Power delivers a firm, precise feel, enabling powerful, explosive shots with outstanding control. The ideal choice for those who demand direct feedback on every strike, turning the player's energy into pure power.

M-EVA BALANCE

The perfect blend of control, power, and comfort. This medium-high density foam adapts to all playing styles, ensuring total on-court versatility. M-Eva Balance delivers a well-rounded response that enhances performance without sacrificing feel. A technology designed to expand your game and support your evolution as a player.

S-EVA FLEX

Soft-density foam that maximizes ball output and makes every shot easier to execute, adapting to all player profiles. S-Eva Flex transforms each impact into a smooth, agile, and fast experience—helping you play a more dynamic and accessible game. An innovation created to boost your confidence and elevate your technique.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

APPLIED TO THE SURFACE

NEW

SPIN BOOST TECH

Technology applied to the racket's surface. This textured finish extends across the hitting area, allowing players to generate spin with greater ease and precision. Spin Boost Tech enhances control during play by adding extra grip on every shot, amplifying the player's feel on court. An innovation engineered to boost your spin potential.

REACTIVE HOLES

Technology applied to the racket's hitting surface. This new hole pattern is designed to improve stability, accuracy, and ball output thanks to the curved layout of the holes along the outer area of the surface.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

APPLIED TO THE FRAME

NEW

SHOCK SHIELD

Technology applied to the frame of the racket, made of a 5 cm technical rubber designed to absorb vibrations. It reduces strain on the joints and helps balance the racket's weight distribution, enhancing stability, comfort, and control with every shot.

AIRFLOW DESIGN

Advanced aerodynamic technology integrated into the racket's frame. Strategically placed air channels reduce total weight while optimizing airflow, allowing for faster, more agile, and powerful play. Airflow Design redefines your hitting experience.

FIVE SIDES TECH

Structural technology built into the racket frame, featuring a five-sided design for increased rigidity. This advanced geometry reduces twisting and enhances stability during impact, allowing for greater shot accuracy. Five Sides Tech has been developed to maximize performance by combining speed, control, and power.

T-CARBON

Technology applied to the frame of the racket. It consists of a carbon fiber tubular construction, which helps minimize unwanted vibrations upon impact, maximize shot firmness, and provide greater structural stability. T-Carbon promotes an optimal balance between control and power, enhancing overall performance.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

APPLIED TO THE HEART

NEW

DYNAMIC STAR

Technology applied to the heart of the racket. It features an interchangeable star that allows you to adjust the balance using two weight options: 4.8 g (standard) and 7.2 g (optional), offering added customization and adaptability to your playing style.

NEW

ANTI-VIBE

Technology applied to the heart of the racket, made of a technical rubber designed to absorb vibrations generated with each shot. In addition to enhancing comfort, Shock Shield serves as the structural base for integrating the interchangeable star from the Dynamic Star system, reinforcing the racket's overall stability and performance.

Technologies included in:

**BLACK
TITAN** *Raptor+*

STRAVIE TECHNOLOGIES
BY STARVIE LABS

ANATOMIC BRIDGE DESIGN

Bridge design shaped to naturally accommodate two-handed grips. Its anatomical form improves ergonomics and comfort, supporting better posture and control during play.

NEW

AIR BOOSTER

Cutting-edge aerodynamic system built into the racket's heart. This innovation channels air through the structure to increase acceleration and power with every movement. Acting like a built-in propulsor, it provides quicker responses, more precise shots, and a unique playing feel. Designed for players who are always one step ahead.

NEW

GEO AIR CORE

Technology applied in the racket's heart. Its geometric structure shifts the balance toward the grip, making movements more agile and reducing player effort. The result is a lighter, faster, and more efficient playing experience with improved feel on every shot.

NEW

TRITECH CORE

Triple-structure aerodynamic design applied at the heart of the racket. It optimizes balance and weight distribution, delivering exceptional feel and control. TriTech Core improves maneuverability, sharpens shot accuracy, and enables players to unleash their full potential with smoothness and confidence.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

HEPTA BRIDGE

Bridge technology featuring a unique 7-sided geometric structure that enhances stability by reducing torsion and flex at impact. Its open design adds lightness and increases maneuverability, allowing for faster and more precise shots. It's not just a design—it's performance-driven engineering that delivers control, power, and precision in every stroke.

NEW

ADVANCE CORE

Bridge technology engineered to reduce vibrations and shift the balance closer to the grip, offering enhanced control and stability. Advance Core provides increased precision, improved handling, and a smoother, more comfortable playing experience.

GEO BRIDGE

Hexagonal architecture based on geometric and aerodynamic principles, designed to transform maneuverability into raw power. Geo Bridge allows for quicker acceleration with less effort, generating more powerful shots while minimizing vibrations to the grip and elbow. This innovation elevates performance while protecting your physical well-being—power, control, and comfort like never before.

STRAVIE TECHNOLOGIES
BY STARVIE LABS

APPLIED TO THE GRIP

LONGER HANDGRIP

Grip technology featuring an extended handle length for a more secure and comfortable hold. It allows for greater leverage, resulting in more power and precision. Longer Handgrip is ideal for players who seek enhanced grip comfort and added performance.

NEW **Z-shock**

Technology applied to the grip, developed with an anti-shock system that absorbs vibrations generated upon ball impact. This innovation significantly enhances playing comfort and ensures a firmer, more secure hold, allowing for optimal handling and greater control with every shot.
